Title of Invention

A Method of Network Hospital of Reclassification of Diseases That Have Been Made a Diagnosis

Background of Invention

The patent for invention "A Method of Network Hospital of Reclassification of Diseases That Have Been Made a Diagnosis" is invented and innovated according to the "Examination Standard for the Invention Related to Computer" issued by USPTO in 1996. This invention belongs to a series of the specific operational procedures executed on a computer or by using a computer, which convert the following items into code: 40 kinds of diseases, symptoms of 40 kinds of diseases, symptoms of reclassification of 40 kinds of diseases, classification and classification principle of treatment of 40 kinds of diseases, as well as the label of prescription of health complementary products of treating 40 kinds of diseases, and the label of prescription of health complementary products of treating 30 kinds of reclassification of diseases. Through clicking the keyboard and key mapping to call out and inquire about the different symptom, health information of different classification of every individual so as to receive the treatment result of every individual, which meets the needs of American for the health service of individualization. This invention belongs to the technology of method of the literal code and is the method of legal subject.

The invention involves in a kind of innovative technology that uses the floppy disk and keyboard operation system of computer to display the information of the software data and dictionary on the display and to convert the graphic and literal information of the following items into code: disease, symptom, classification, prescription label. Through clicking the code (keyboard and key mapping) to call out and inquire about the individual health information to consult the contents about the different symptom, classification, individualization therapeutic methods of same kind of disease. Through coding, inquire about and consult the contents of individual health and therapeutic methods on the display.

In 1996, USPTO issued "Examination Standard for the Invention Related to Computer". The examination standard of object and functional description of patent application is a functional material and character of computer program and data structure and etc., which are the information that can be fetched by a computer. If containing a data structure that has built a functional or structural relationship between data and object that fulfills the program

functions, the carrier that can be fetched by a computer will be regarded as an object that belongs to an object legally protected by the patent law. And also, if containing a data structure that has built a functional or structural relationship between data and object that fulfills the program functions, an object that can be fetched by a computer will be one of kinds of legally protected objects. The encoding method feature of graphics and character in this patent has a one-to-one correspondence with the keyboard feature, definition of every key mapping, and position of each key mapping in the entire key mapping in the use of encoding method, which meets the requirements of "Examination Standard for the Invention Related to Computer".

In 1821, Charlbs Babbage invented the first computer. In 1975, Stephen Jobs and Steve Wozniak invented the personal computer with display, built-in keyboard and magnetic disc storage, which is called as Apple. This invention made the computer popular all over the world. For some special reason, people link the computers to share information. Since 1990's, the computer has bee widely used in the society and commerce and people have built up the Internet. Using computer, server and router, people handle the business of Internet, which makes information pass unimpeded. These networks, organizations and computers form a world of Internet. The change and technical innovation of Internet changes life style of people and also changes our world.

The Internet and computer have entered every field of the society, commerce and family and the time when people sit before the computer is increasingly longer than before. How to know health state of people by themselves through computer and Internet is the general requirement of people brought out by network culture. People need the "network" with the real significance.

The consulting systems for health in the Internet can be classified to two classifications. The first classification is the consulting systems for health that replace the fax function. And second classification is the consulting systems for health that replace the consultation system. These systems are short of the innovation and increase of the original function of computer program and the Internet, which has little advantage comparing with the orthodox method.

Brief summary of the Invention

The America Common Law 103-417, the Edible Complementary Goods Law 1994 and Congressional ruling point out: that to promote the health state of American people is the first matter of the country; American people's need to get the knowledge and information of a long time health is increasing ceaselessly and people pay more and more attention to themselves' health state; combined with medical care, to promote the health and life style with health and to increase man's life span; To reduce hospitalization costs is the most important to the future and economic advance of the country; To appropriately supplemental nutrition to reduce the chronic diseases and reduce the medical care expenses; health's eating and drinking perhaps does not have to spend expensive hospitalization costs and avoid the unnecessary operation. These law articles are exactly the basis for invention of patent "A Method of Network Hospital of reclassification of Diseases That Have Been Made a Diagnosis".

There are differences among human bodies and among diseases. For this reason, people have the needs of individualization health service. People's constitutions are different. When people suffer from same disease, their classification and symptom are also different. To scientifically reclassification according to the specific condition of the individual is the important task of medicine research of America and also is the need of American people for health. This is a problem that this patent tries to probe into and solve.

The following is the important invention to nonobviousness: to make reclassification to disease with confirmed diagnosis by the network and computer intelligence, using computer intelligence to select combined goods of health complementary goods according to symptom of individual and prescribe the right remedy for an illness. This patent will solve several important difficult problems in the fields of medical and pharmacological science in America, which are problems that American people want to solve but do not solve. The United States patent law uses the nonobviousness and requires the patent have a enough practicability and importance. In the practices of patent judgment, American court creates and formulates the innovation standard to surpass and to go beyond novelty evaluation.

4

383 U.S.1. 148 USPQ, 459 (1966) of America Supreme Court explains who to judge the nonobviousness of a patent according to Clause 103 of America Patent Law. To take the difficult problem that people want to solve but do not solve in a long time and other people's unsuccessfulness as a kind of mark: indicia. This patent for invention can meet the requirements of America Patent Law.

Brief Description of the Several Views of the Drawing Table of Contents

Table 2 The table of an account in member's own words

I would like to answer the following questions:

- 1. Where do you feel unwell in your body and what kind of disease do you suffer from?
- 2. Which hospital or doctor made a definite diagnosis for the disease you suffer from?
- 3. What kind of disease you suffered from did they diagnose?
- **4.** When did you begin to suffer from the disease?
- 5. What cardinal symptom do you have?
- 6. What therapeutic methods or what kind of medicine did you use for treating your disease? What about the curative effect?
- 7. What kind of other diseases did you suffer from before?
- 8. Would you like to accept this network hospital's treatment and advice about health?

Detailed Description of the Invention

- 1. A network hospital method to classify the diagnosed disease detailedly includes electronic software dictionary content on the screen and concrete health information system by knocking keyboard. It is characterized in the 40 kinds of disease; symptom of 40 kinds of disease; one of the symptoms among the 40 kinds of disease; detail classification type and treatment principle of one of the 40 kinds of diseases; treatment formula label of 40 kinds of diseases; figure, phrases, words description of treatment formula label of 30 kinds of classification listed in the contents on the screen, number and determine the position respectively as per characters on the keyboard. Knocking screen number 1-40 can open the information base EMS memory, pick up necessary information and obtain health result.
- 2. According to the description of detailed description of the invention, "A network hospital method to classify the diagnosed disease detailedly", which can apply and outspread the information to obtain personal health consulting results by two special facilities. The aforesaid facilities are computer processing device, storage device, displayer, keyboard. Use computer to handle facilities to make a dictionary-like, figures and words description for 40 diseases (Form 3), symptoms of 40 diseases (Form 4—Form 43), reclassificatory symptoms of 40 diseases (Form 84—Form 83), classification and tailored treatment principle of 40 diseases (Form 84—Form 123), intelligent treatment plan of one disease as an example after being classified (Form 124), health supplementary formula label for 40 diseases treatment (Form 165—Form 164), health supplementary formula label for 30 types classification treatment (Form 165—Form 194) in the storage device data base, realize correspondence by knocking the code and keyboard and pick up and inquire individual healthy information and results.

3. The following procedure starts from filling "apply to enter network hospital member list (form 1)". Fill in form 1, after obtaining network hospital member qualification and member code, input the member code, knock "OK" on the keyboard, personal description form of members (form 2) can be obtained. Fill in the personal description form of members, knock "OK", 40 kinds of diagnosed diseases form can be obtained (form 3).

Knocking A on the keyboard will show $A_1-t_1u_1v_1w_1x_1y_1z_1i_1$ (form 4)

Knocking T, U, V, W, X, Z, I on the keyboard will show A_1 (form 3)

Knocking A on the keyboard will show A₁ formula label words (form 125)

Knocking OK on the keyboard will show $A_1-a_1b_1c_1d_1e_1f_1g_1h_1i_1j_1k_1l_1m_1n_1o_1p_1q_1r_1s_1$ figure and words (form 44).

Knocking ABGH on the keyboard will show $E_1 \ G_1$ figure and words (form 84)

Knocking EG on the keyboard will show B_2B_{14} figure and words (form 124)

Knocking B2 on the keyboard will show B2 formula label words (form 166)

Knocking B_{14} on the keyboard will show B_{14} formula label words (form 178)

Knocking OK on the keyboard will confirm the combination of healthy supplementary things of A_1 , B_2 , B_{14} .
